EDUCATION

St. Mary's College of Maryland

Major: BS in Computer Science; Minor in Economics

Saint Mary's City, MD

May 2026

- NCAA Men's Soccer Varsity Athlete
- Dean's List

EXPERIENCE:

Operations and Network Internship | Office of Information Technology SMCM

January 2025-May 2025

- Delivered campus-wide IT support through a centralized ticketing system, troubleshooting network outages, device connectivity issues, login failures, and hardware problems for students, faculty, and staff.
- Assisted with network and systems operations by supporting servers, switches, routers, and wireless access points, while participating in on-site troubleshooting across academic and administrative buildings.
- Supported identity and access management and IT asset operations, including MFA setup, password resets, VPN access, account permissions, secure ID card issuance, and endpoint deployment with proper security and labeling procedures.

Software Start Up | SMCM

August 2024-May 2025

- Collaborated with local nonprofit and campus clients to support the development, testing, and deployment of Django-based web applications, ensuring alignment with defined business requirements and user expectations.
- Served on a QA-focused team alongside R&D, designing and executing manual test cases, creating structured QA documentation (Excel), and validating functionality across Google Cloud-hosted production environments.
- Reviewed and tested existing codebases (Python, Java, HTML), identified and documented defects, and verified live-site readiness prior to public launch to support long-term maintainability and future development teams

Camp Instructor | Maryland Soccer Association | Summer Seasonal

July 2021-August 2024

- Coached children ages 4-14, developing leadership, communication, and problem-solving skills by tailoring instruction to individual needs.
- Collaborated with team members to create a structured, engaging environment, emphasizing teamwork and adaptability in managing diverse groups.
- Certified in CPR, AED, and First Aid, demonstrating strong attention to safety and responsibility.

PROJECTS:

QCheck - Checkbooking App

HTML, CSS, JS, React(Node.js), Firebase Authentication, Firebase Cloud

- Built a personal finance web app using React and Firebase to track deposits, withdrawals, and balances.
- Used AI tools to help design features, debug code, and improve the overall application workflow.
- Added user login, secure data storage, and charts so each user can manage and visualize their transactions.

AdaptAMap - Accessibility Product

Maven, Springboot, Snowflake API

- Helped build backend features for an accessibility mapping app using Java, Spring Boot, and external APIs.
- Implemented foundational components of an internal alert and support system to surface accessible data, contributing to partial frontend-backend integration within project time constraints.
- Collaborated in a small team using Git and VS Code to design and present a scalable solution roadmap, outlining future enhancements such as multilingual support, expanded filtering, and advanced accessibility features.

Personal Website - Portfolio

HTML, CSS, JS, Flask (Python)

- Built a responsive multi-page web application with server-side rendering
- Implemented dynamic UI interactions and modular styling
- Applied AI-assisted development to streamline debugging and iteration

Java Educational Graphics Library - Educational Support

Java

- Designed and implemented a custom Java library that abstracts the Swing API to simplify 2D graphics rendering for introductory CS students
- Encapsulating complex GUI components into reusable, beginner-friendly classes and methods
- Applying object-oriented principles (polymorphism, inheritance, abstraction, encapsulation) to improve usability and reduce API complexity
